

Aichi Steel to Exhibit MI Sensor at electronica 2022

Aichi Steel Corporation (President: Takahiro Fujioka) will exhibit MI Sensor at the "electronica 2022" the industry's leading comprehensive trade fair where the electronics industry gathers from around the world, from November 15 to 18.

At the exhibition, we will introduce products and applications of our original ultra-sensitive magnetic sensor "MI sensor*" and conduct demonstrations to allow visitors to experience its high sensitivity.

We will widely introduce the high functionality of MI sensors, and through exchanges with visitors, we will explore new ways to utilize MI sensors and develop overseas markets.

* For more information on the MI sensor, please see our website.
